Plans for Next Iteration:

The requirements for Iteration 2 include the following:

- Revised versions of the 2 Full Use Case Descriptions

- Revised Domain Model

- 2 New Fully Dressed Use Case Descriptions

- 2 Sequence Diagrams

- Overall Class Diagram

- Minor Release of the Application

- Discuss Iteration 3

We plan on first trying to code the program itself as much as possible to get a basis for the use cases and the revisions we must make. We will do this by splitting up responsibility for each section of the code between us. Within the first week of the iteration, we will try to build a barebones, working board that will allow the flipping/rotating of a piece. Once this is done and the feedback for the first iteration is given back, the revisions and new fully dressed use cases will be started on. We will continue to meet on a weekly basis to discuss any open issues or any other sort of problem that we may be experiencing.
